Web Designing

We design and build fresh, dynamic websites for organizations of all sizes. Combining years of experience with the latest technologies we can ensure that your online business strategy highly effective and tightly integrates with your day to day process.We believe that you should able to easily manage and maintain your own website. When you commission a website from DIGITS, it is supplied with an inbuilt, multi-lingual Content Management System (CMS). All you need to manage your website content or menu structure in an internet connection, web browser and a basic understanding of word processing.

Our first step is always to meet with you and learn everything we can about your requirements, your business, your target market and your competitors. This information will help our website design and development team to create draft designs for your feedback and approval.

We work closely with you during each stage of website creation process. Whether you want a simple website or a fully fledged solution, we can help you to realize your online ambition.

Quality assurance

DIGITS aims at maintaining its good name and high work quality.

Software Quality Management Lifecycle

We have developed our own efficient methodology to check the quality of the custom software development. We use the RUP (Rational Unified Process) to manage the development processes.

We abide standard flow specifications of company when we do every project. These specifications are based on company's practice. Basing on project's lifestyle characteristics, we divide project into several process domain with every process domain complying each specification. By appraisal, we confirm whether or not this process domain reaching anticipate object. Only when we go through the appraisal of this process domain, we can go the next process domain.Also, we attach much importance to software testing which is divided into two kinds. One is Unit Test of the module, and the other is System Integration Test. The Unit Test goes with the whole developing process. In order to ensure high quality of the code, we claim ourselves that each program code should have relevant testing code and the System Integration Test is the major work in the testing phase. Usually, we need to finish 3 round regressive testing in this phase. The version released after the testing is called the Alpha Version. This assures project quality in great degree. All processes are well documented, institutionalized and evaluated, ensuring us to become more effective and efficient with each project we work on.

As communication is especially important with the physical distance between our clients and us, we pay special attention to the effective communication. We keep smooth communications with you during the development process.

Why DIGITS

DIGITS team core value is to generate business value for clients. We provide

• **Integration:** our team understand how to collaborate with your organization/internal development team regardless of culture differences.

• **Value:** fast implementation from business requirements to final software product, without time-consuming processes for requirement specifications.

• **Quality:** our team have years experience in software development, and we utilize Agile principles and practices to achieve high efficiency and quality.

Our team are trained to have both quality consciousness and innovation consciousness. We focus on finding solutions to clients' business problems, not just writing programming code and implementing solutions.

DIGITS team get to know our clients' business goals. It brings deeper vision to team when facing problems and enables team to think at a higher level and with a wider perspective.
